

INTERNET SAFETY

The Internet is an amazing place to play, work and learn. It lets us communicate with billions of people around the world.

However, it can be dangerous. It's important to **know the risks** and learn how to **keep yourself safe online**.

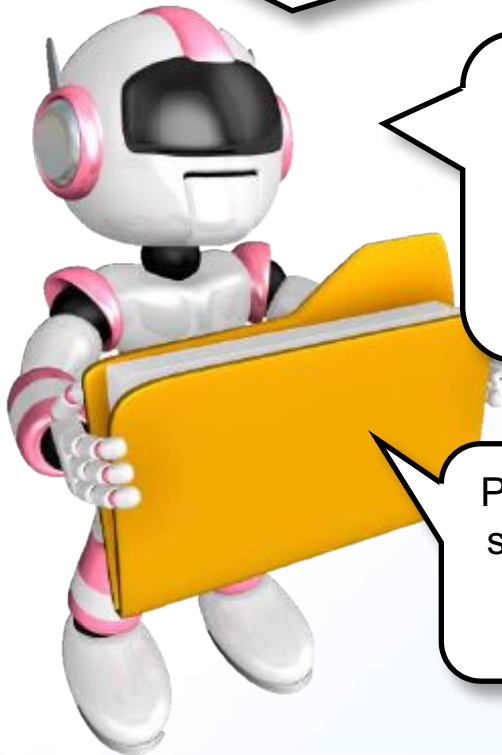

WHAT IS THE INTERNET?

The Internet is a huge collection of computers around the world. They are all linked together and they can 'talk' to each other, sharing data, images, music and other types of information.

PERSONAL INFORMATION

Everyone has information that is personal to them. This includes their name, age, address, passwords and more!

If you share this information with others, they could use it to contact you or pretend to be you (and possibly get you into trouble).

Photos are personal too, so think carefully before you share a picture of yourself or others.

PASSWORDS

Passwords can be tricky to remember but they are VERY important. They help to protect your computer, mobile devices, online accounts and personal information!

Try to use strong passwords that other people won't be able to guess.

A strong password has...

- More than 8 characters (the longer, the better!)
- Numbers and Symbols
- Upper and lower case letters

Strong Passwords

Shoe\$8Green
Moon_9Cake
#Sun3h1ne£

Weak Passwords

charlie

Always use different passwords on different accounts and sites!

Before you post anything online or send a message to someone, ask yourself these questions.

If the answer is no, don't post it!
