

Nutgrave Climate Warriors- Are you with us?

As a school we are keen to get our pupils thinking about how they can make a positive impact on the world around them. As part of this, we are encouraging them to take part in an initiative called Young Climate Warriors. This initiative provides an opportunity for schools, families and individuals to help children learn about climate change and empowers them to take positive action to cut carbon emissions.

Inspired by Greta Thunberg's call for immediate action to tackle climate change - 'you are never too small to make a difference' - Young Climate Warriors sets weekly term-time challenges. These are simple, age-appropriate and fun. By undertaking the same challenge in the same week, Young Climate Warriors enables children to work together as a team; helping them see the cumulative results of their actions, as well as having a medium for making their voices heard.

If your child would like to take part, please register (for free!) at www.youngclimatemarriors.org.

This only takes a few seconds to do - simply hit the subscribe button and provide an email address - and you will then receive the weekly challenge to try at home.

This weeks challenge focuses on 'water' - it asks Young Climate Warriors to change their habits to help save water at home, as well as encouraging them to think about water issues experienced by others around the world.

This week's
challenge
26th April

Remember to
Hit the RED BUTTON -
CHALLENGE COMPLETED!

Can you remember the devastation caused by Storm
Dennis - it was only 2 months ago!
Climate change is making droughts and floods worse.
Can you save water this week?
Switch off your tap whilst brushing your teeth?
Turn off the dripping tap? 5-minute shower limit?
Go the wateraid.org and learn about water issues around
the world.

We need to succeed
in halting climate
change, otherwise
1 in 4 children
will live in regions
where water is
dangerously scarce
by 2040.

The average individual in the UK uses 140 litres of water per day. A typical bath takes 80 litres. A dripping tap can waste 95 litres in a day.

Worldwide, more than 800 children under 5 years old die every day from diarrhoea, caused by dirty water.

Climate change is making water shortages and flooding worse -
